A couple of weeks ago I told you about the black mondo grass growing in our main front garden bed. There’s lots of it, but it looks good and is slow growing so I’m happy to accommodate it.

However there are other botanical residents – apart from weeds – that love the conditions and aren’t so welcome because they’re a little too vigorous. Off the top of my head, muscari or grape hyacinths are as bad as bluebells and forever banned from my free draining soil where they hassle like tiny Triffids; and aquilegias that self-seed prolifically, blanketing the beds if they’re not weeded out fastidiously.

I now have another contender, planted in the deep shade beneath our substantial camellia where (surprisingly) it’s been growing strongly for a couple of years. It blooms beautifully through January and February – and often later in the year too. The pretty pink whorl shaped flowers of the lesser periwinkle, Vinca minor sparkle while the glossy green foliage brings rich colour to otherwise dull, bare earth.

But the mother plant is beginning to look a little too healthy in my rich, deep sandy soil, and baby plantlets pop up throughout the bed at random. Vinca is stoloniferous, propagating its self from low branches or surface runners (like strawberries), but because the babies appear widely spread I’m beginning to wonder if it’s self-seeding, or suckering from roots, too. If that proves to be the case it will have to go.

Have a great gardening week.

Tomatoes are relatively easy to grow, and can produce a bountiful crop. Ruth suggests two ways of sowing yours.

Tomatoes are so popular that even non-gardeners like to have a go at growing them! Just a couple of plants will reward you with plenty of delicious summer fruits for salads, sandwiches or as ingredients in cooking.

There are all kinds of tomatoes to try, from the tiniest cherry types, through to full-flavoured, giant beefsteak varieties. They can come in all kinds of colours, too.

Sowing can take place from February through to April. Late winter is the time for starting crops in an unheated glasshouse, while you can sow in spring for outdoor crops. Depending on the sowing date, the on-going temperatures and the variety, harvesting can be as early as June under glass, and as late as the first frosts outdoors.

Tomatoes are easy to grow from seed – so don’t get carried away! Usually only a few plants are needed, and germination is almost always good. If you are unable to sow seeds as you can’t maintain the right conditions for germination, don’t worry: just buy tomato plants in spring from garden centres.
Looking after tomato seedlings

After germination, tomato seedlings should be placed in the best-possible light (still warm in the greenhouse or under cover) to prevent them becoming long, thin and leggy. Tall, leggy specimens produce their first flowers high up on the plant, leading to bare, non-productive lower stems. The ideal temperature should be around 18°C (65°F). After about two weeks, the seedlings should be large enough to prick out into separate pots of multipurpose compost. Hold seedlings by their seed leaves, to avoid damage to the delicate stems. After prickling out, water with tepid tap-water. Then, when the young plants reach 6in (15cm) high, place them in a slightly cooler temperature of 16°C (60°F).

Prick out your seedlings into a larger pot

Using a Gro-Sure Sow Smart kit

The plants will grow on happily in their Gro-Sure compost pods, and can be planted in their final growing position when seedlings are 4-5in (10–15cm) tall.

1 This kit is so easy to use! Remove the clear plastic lid, turn it over and fill it with water.

2 Then carefully place the tray, including the compost plugs (still with their plastic toppings), into the water.

3 Once the plugs have absorbed the water, remove the plastic stickers that are protecting the seeds underneath.

4 Pour away any excess water, and put the lid back on. Place on a warm, bright windowsill, out of strong sunlight.

Easy peeling: Slice a shallow ‘X’ in the base of a tomato, and drop it in a pan of boiling water for 45–60 seconds. Transfer to a pan of iced water for a similar time, and the skin comes away cleanly.

Training habits

- **Vine/cordon**: One central stem is supported by a cane or string. Pinch out the sideshoots that appear between the leaf and main stem. Tomatoes that grow in this way are also known as ‘indeterminate’.
- **Bush**: These tomatoes produce compact plants with many short sideshoots that end in a cluster of flowers; these are ‘determinate’ tomatoes. Tie the plants loosely to a 3ft (1m) cane. Don’t remove sideshoots as this will reduce cropping.
- **Beefsteak tomatoes**: These produce vigorous side branches that often end in a flowering truss. Remove these only if the growth is unruly.
Planting bulbs for summer colour

Ruth recommends getting summer and autumn-flowering bulbs in now for months of interest and colour

**ANNUALS** and herbaceous perennials are fabulous for brightening the garden, but for simple, space-filling brilliance, you’re onto a winner with bulbs. Plant summer and autumn-flowering varieties now, as the soil is starting to warm up, and they will reward you with structure and colour throughout your borders and in patio pots.

From velvety Anemone de Caen, which flowers in profusion in June and July (earlier if planted last autumn), through the summer’s profusion of agapanthus, lilies, bearded iris and gladioli, to the autumn brightness of lily-pink nerines, there truly is a bulb to bring colour from early summer to late autumn. They are widely available in garden centres and online now, and should be planted as soon as possible after purchase to avoid drying out. They may flower poorly after lengthy storage. If you are planting in borders, position bulbs in clumps of at least six to get the most impressive displays. It is also worth wearing gloves when handling bulbs and corms, as they can cause skin irritation.

1. Place crocks at the base of the pot. For one season, use multi-purpose compost and grit. For longer-term planting, use John Innes No 3 instead.

2. Plant the bulbs with their shoot-producing ‘nose’ upwards, at three times their own depth, and one bulb’s width apart.

3. Cover the bulbs with the remaining compost, leaving around an inch (2.5cm) at the top for watering. Lightly firm the compost.

4. Water well to help settle the bulbs, and place the pot on feet to boost drainage. Give the plants a liquid feed when the first shoots start to show.
Create easy colour with these bulbs
Six favourites for a bright garden through the seasons

1 **Agapanthus**: Also known as African lily, with heads of brilliant blue or white flowers, these perennials like full sun.

2 **Nerine bowdenii**: Unusually these are planted on the soil surface, for a brilliant splash of pink in the autumn.

3 **Oriental lilies**: The stars of the show, they flourish in containers, and can be transferred to a border after flowering.

4 **Crocosmia**: These scarlet or orange South African flowers grow fast, in clumps, and will thrive in full sun.

5 **Gladioli**: Plant deep, in rich soil, water well, and you will have long-lasting flowers for cutting, in many colours.

6 **Bearded iris**: Classic cottage garden beauties. Their size and elegance make them ideal for indoor arrangements.

**Lily danger**: Lily pollen is toxic to cats, so if you have a mog or two, you may want to buy widely available pollen-free varieties.

---

**How to plant summer-flowering bulbs in your beds and borders**

Create a stunning show of summer colour throughout your garden

For the best display, plant bulbs in clumps of at least six plants. Dig a hole that is wide and deep enough to take all your bulbs. Work out their planting depth by measuring their length, and plant them at two or three times it.

If the soil is poor or heavy, add lots of multi-purpose or well-rotted garden compost. Plant bulbs at twice their own width apart. Water well, clearly mark their position and label so you don’t accidentally dig them up.
“50 Singles Plus 25 Doubles – Snowdrops In The Green... The Guaranteed Way To Succeed With These Early Spring Flowering Beauties!”

Be the first to enjoy these delightful Spring blooms!

The earliest and bravest of all flowering Spring bulbs, the delicate snowdrop – with its tiny white petals and green-tinged centres – bursts into bloom when the weather is at its very worst!

While the rest of your garden lies decidedly dormant, this cheery, fresh-faced little fellow brightens even the gloomiest looking garden. Notoriously difficult to grow from the dry bulbs found in garden centres, the best way to ensure success is to plant Snowdrops while they are still in leaf – otherwise known as ‘in the green’. The soil surrounding the bulbs contains a ‘special fungus’ which encourages a strong and vigorous new root system. By planting in this way you can look forward to a stunning display in your garden from the very first season... and for years to come. FANTASTIC VALUE at just £14.99 for 25 Double or 50 Single Snowdrops – or buy both for only £19.98 and SAVE £10.00! PLUS, you can save A FURTHER £5 when you buy 2 collections – see coupon for details. CODE: 630014.

- Guaranteed to establish well and return year after year
- Displays get bigger & better!
- Flowers from Feb to March
- Easy to grow requiring no maintenance
- Extremely hardy varieties
- Grown right here in the UK

OUR DOUBLE GUARANTEE TO YOU
1. If you’re not totally happy with your order, return it within 30 days and we’ll replace or refund in full.
2. Should any hardy plants fail to thrive thereafter, we’ll replace free of charge – you just pay the PP&I!!

After a week of acclimatisation, plant the bulbs in the garden. Set them twice as deep as the height of the bulb, and a bulb’s width apart. Cover with soil, water then mulch. Mark their position – they’ll flower next spring.

Gardening Week
with AG’s gardening expert Ruth Hayes

I’m sowing some morning glories for a climbing splash of colour

Sowing annual climbers

There are some beautiful annual summer-flowering climbers for sowing over the next few weeks, says Ruth

Even gardeners, it seems, grow a range of flowering annual climbing plants – the plants that are sown now, grow and flower in summer, and then are thrown away in the autumn. The most commonly grown of these plants is, of course, sweet peas. But there are many others, too (see panel right).

One of my favourites, and one that is very easy to grow, is the morning glory (Ipomoea tricolor ‘Heavenly Blue’), with its intense large sky blue trumpet flowers that are at their absolute best when the early morning sun falls on them during high summer. It is available from all of the main seed companies. However, there are also other colours: pale blue (‘Fragrant Sky’), purple (‘Star of Yelta’), pink (‘Candy Pink’) and white (Ipomoea alba).

With ‘Heavenly Blue’, flowers up to 2½in (6cm) across appear throughout summer. It prefers a sunny, sheltered, warm site, and is ideal for growing up trellis panels, fences, poles, and so on. It is also suitable for greenhouse or conservatory growing.

Soak the seeds overnight in cold water to prime them. Sow them in trays or pots on the surface of a good, free draining, damp seed compost with ¼in (6mm) layer of compost or vermiculite over the top.

Place in a propagator at 20–30˚C (68–86˚F) or seal the pot inside a clear polythene bag and put it on a warm windowsill. Germination usually takes between 10–17 days. All the seeds (right) can be sown like this.

Transplant seedlings into 5in (13cm) pots, and grow on in cooler conditions for at least two weeks before planting out in late spring after all risk of frost.

Other annual climbers to try

- **Cup and saucer vine** (Cobaea scandens): The purple bell-shaped ‘flowers can be 2½in (6cm) across.
- **Black-eyed Susan** (Thunbergia alata): Bright orange blooms with a black centre.
- **Nasturtium** (Tropaeolum majus): Long-flowering plants that scramble over walls, sheds, fences etc.

1 Christmas hyacinth bulbs will by now be sorry looking plants with dead flower stalks and leaves. Let them die down and then cut them off. First acclimatise the plants – stand the pot outdoors in the day, bring it in at night.

2 After a week of acclimatisation, plant the bulbs in the garden. Set them twice as deep as the height of the bulb, and a bulb’s width apart. Cover with soil, water then mulch. Mark their position – they’ll flower next spring.
Primroses to watch out for

New primrose varieties give us even more spring colour, says Peter

The plant breeder’s pollinating brushes have done remarkable things to the wild primrose, now we have them flowering from September to summer in every colour of the rainbow. Even so the pale yellow of our wild species en masse and among bluebells in woodland take some beating.

The breeders haven’t overlooked this charm and one recent hardy introduction is ‘Everlast’ from Belgium with pale yellow flowers. ‘Everlast’ is the right name for this novelty – it mirrors winter flowering pansies and viola with a mass of flowers from September right through winter and spring.

In my own garden compact primrose plants appear to be self-cleaning with more new flowers opening above the older fading blooms. The rich green leaves spread out like a ruff increasing in size as the mound of flowers gets larger.

Shades in modern hybrid primroses, bred for pot sales, are becoming ever more exotic and while most are sold as mixtures their appearance in borders and containers is better with some colour coordination. Blue and yellow or cream work well together as do russet and red shades. Worth noting that when planting outside it is advisable to go for dark leaved types, which usually have greater hardiness.

Four modern primrose colours have been mass-produced for current sales this month. They are: ‘Blackberry Ice’, ‘Cherry Blossom’, ‘Clotted Cream’ (a very popular rich cream) and ‘Firecracker’. All are real eye catchers and stocked by garden centres including Notcutts, Squires and Strikes.

“Flowers through winter and spring”

Peter’s tips for perfect primroses

1. Vine weevil larvae go for the roots of all primulas. So spray after flowering to ensure they don’t undermine the plant.
2. In warm temperatures biological control or systemic insecticide offer best protection for perennial types of primroses.
3. White flecks and/or stickiness on leaves indicates the presence of aphid attack and the need to control them.
Lovely, comfortable sandals – good price too, plus quick delivery.

Dahlias have experienced a surge in popularity, and it’s easy to see why. Flowering from late June and putting on their finest display in early autumn, dahlias will fill your garden with colour at a time when many other plants are running out of steam.

You may wonder why I’m planting frost-tender dahlia tubers in chilly February. The answer is that I want to cheat the seasons. It seems cruel when autumn frosts cut a dahlia display short. So I want mine to flower as early in the summer as possible. While you wouldn’t normally plant dahlia tubers outdoors until after Easter, you can start them now in a frost-free greenhouse.

I’m starting off with my favourite variety, the rich-red ‘Bishop of Llandaff’ – complemented by the pinky-white ‘Bishop of Dover’ and the red-and-yellow cactus-type ‘Tahiti Sunrise’. See my step-by-step (right) on how to plant tubers in big pots.

Start dahlias in pots

You can cheat the seasons by getting dahlia tubers underway in a frost-free greenhouse now, says Marc

Dahlias like rich, well-drained compost so choose a quality multi-purpose with incorporated fertiliser.

Choose big, deep pots with plenty of drainage holes. Pots should have a minimum diameter of 12in (30cm).

Set the plant about (4in/10cm) deep in the pot. Fan out the tubers with the central stem pointing upwards.

Top-up the container with compost, water well, label and keep at a minimum temperature of 5°C (41°F).

Pruning a winter-flowering jasmine

- Prune winter-flowering jasmine (Jasminum nudiflorum) after flowering.
- Jasmine blooms on the previous year’s growth, so cutting it back immediately after flowering gives it time to produce new stems to carry flower buds.
- Cut back flowered stems to a strong sideshoot, lower down the branch. Then thin out crowded, crossing or misplaced branches, and remove weak stems.
- Winter jasmine will tolerate hard pruning, and can be cut back to within 2ft (60cm) of the base, though this can delay flowering for a year or two.

Cut back flowered stems to a strong sideshoot
42 Begonia Illumination Apricot Shades F1 –
only £12.95!

The amazingly resilient Begonia with trails up to 40cm (16in) long!

This breathtakingly beautiful trailing variety is not only pest and disease resistant but is an ultra dependable performer, right at home even in cool, wet conditions. Apricot Shades F1 will grow as happily in sun as semi-shade and keep going all summer long and well into autumn, presenting you with flowing cascades of double blooms in tropical yellows, golds and an apricot blush.

- Delivered as quality plugs in trays of 42 plants approx. 6cm [3in] from root to tip
- Despatched from mid April ready for potting on (with baskets, if ordered)
- Long flowering season from July to October
- Spectacular trails of up to 40cm (16in) long!

Prune apples & pears

It’s time to sow a few early vegetables, but first Lucy deals with fruit – starting with pruning apple and pear trees

While cordon and espalier trees are pruned in summer to limit re-growth, free-standing apple and pear trees benefit from cutting back now. Before the leaves grow, you can clearly see their outline. Keep as many fruit buds as possible – these are round and plump whereas leaf buds are flat and arch-shaped. It’s then simply a case of shaping the tree. While all pear trees and most apples are spur bearing – that’s what I’m pruning here – there are tip-bearing varieties. For tip bearers, follow steps one to three, but omit step four. Your local fruit nursery may be able to help you identify if your tree is tip or spur bearing.

Force rhubarb

There’s a congested patch of rhubarb at East Donyland Hall where I work as head gardener – or rather, there was. I’ve just lifted the huge crowns and dug over the bed. To freshen it up two barrowloads of soil were removed and replaced with well rotted manure. I also added slow-release feed and some mycorrhizal fungi – rhubarb has a big appetite! I’ll leave the crowns on the surface for a few days to get properly chilled – this helps them spring into life. Larger sections will be replanted in the bed, then covered with a forcing pot to exclude light which produces more tender stems. Insulating the pots with straw and manure will bring warmth for an earlier harvests.

Force rhubarb

I’ll put this forcing pot over replanted rhubarb crowns for a crop of blanched stems (inset)
Sow indoor tomatoes

I WOULD imagine that a good three quarters of gardeners grow at least a few tomatoes, and I’m one of them. My parents were commercial tomato growers, cultivating over half an acre of them under glass each year. My ambitions now are far less ambitious but I still wouldn’t be without them.

There are advantages to sowing now to grow in a greenhouse – the extra warmth brings earliness and boosts sugar levels, and it also deters fungal blight. Not all of us have the luxury of a greenhouse, I know, and if you grow yours outside then you don’t need to sow till mid March or later.

I sow them like my chilli peppers (see last week’s column), 10 or so seeds to a 9cm pot of well watered seed compost. Press them down gently and cover with vermiculite, then pop them in a heated propagator set to at least 18°C. They’ll emerge within a week.

I especially love cherry and beefsteak tomatoes, and was particularly taken with the rich flavour of cherry type ‘Sweet Apéritif’ at a trials day last year. For slicing toms, you can’t go wrong with ‘Cuor di Bue’ and ‘Ferline’ in my books, but then of course, taste is utterly subjective.

Let me know your favourites and I’ll give them a try, too!

Sow early peas

SHELLING home-grown peas in the garden is utter decadence for veg growers – I wouldn’t be without a row or two to symbolise the arrival of spring. Smooth-seeded peas are said to be harder than those with wrinkled seedcoats, so choose these for early sowings (try ‘Feltham First’ and ‘Meteor’). Peas are happy to grow in cool conditions because it allows them to develop a strong root system to fend off summer drought, giving you more flowers and pods. However, they won’t germinate below 5°C so I start mine under cover.

Some bright spark came up with the idea of sowing them in guttering. I now do this every year because when you transplant there’s little root disturbance. Sow a double staggered row of seeds ½in (1cm) deep into well-watered seed compost in the guttering, and then place somewhere bright, sheltered and warm.

Force early strawberries

IT’S February, but think forward to May, where you’ve just plucked a punnet of bright scarlet strawberries from plants in your greenhouse, a full four weeks before outdoor plants start cropping.

With that tempting thought in mind, motivate yourself to brave the chill to bring a few plants under cover now.

I potted up plants in autumn for this purpose, but there’s nothing to stop you lifting and potting up soil-grown plants now. You can even buy in cold-stored runners if your budget allows.

Choose an early variety that will crop sooner than others, such as ‘Christine’ and ‘Honeoye’. Ensure also that the plants have experienced some frosts, which speeds flowering under cover. A conservatory or enclosed porch would do just as well as a greenhouse. There, with a little water and warmth, they’ll gently begin to leaf up and flower.

Next Week: Lucy shows how to protect peach blossom, plant gooseberries, warm cold soils for early sowings, and get some garlic in the soil
Gardening Week
with AG’s gardening expert Ruth Hayes

Warm up the beds
Ruth explains how to prepare the soil ahead of seed sowing

March is when the vegetable-sowing season starts in earnest. But you can even sow the seeds of some types now, in late February (see panel, right).

Germination rates will be better if, in early January, you sit a few cloches over the soil, to pre-warm it. If you didn’t, don’t worry – you can still pre-warm the soil from now onwards, as it will get your first vegetable seeds off to a better start.

Cover already dug and fertilised soil with clear plastic sheeting, or cloches. Fleece is less good, as it gets wet and the insulation can be compromised. Black polythene is also effective, but it should be stretched taut, in close contact with the soil.

If your soil is clay, it is better to used cloches, which allow a little of the winter soil moisture to evaporate before sowing.

Step by step
Planting a fig in a pit

1. Figs thrive with restricted roots (which boosts fruiting) in any well-drained soil, so dig a hole 2ft sq (60cm sq) at the base of a sunny south or south-west facing wall.

2. Line the sides with paving slabs set vertically, with top edges protruding 1in (2.5cm) above the surrounding soil, to prevent the roots from spreading.

3. To improve your fig’s drainage, start filling your pit by adding a layer of rubble or broken bricks and crocks 4-8in (10-20cm) deep, in the base.

4. Fill the pit with soil mixed with well-rotted organic matter. Plant your fig 8in (20cm) from the base of the wall, and at the same depth as growing in its pot.

Get ready to sow

While the soil is warming, make sure you’ve got the following seeds to sow outdoors from late February:

- **Root veg**: carrots.
- **Greens**: broccoli, summer cabbage, summer cauliflower, corn salad (lamb’s lettuce), and some types of lettuce.
- **Legumes**: broad beans, mangetout.
- **Others**: spring onions, leeks.

From March onwards the above can still all be sown, along with: globe artichokes, beetroot, Brussels sprouts, parsley, kale, onions, parsnips, peas, radishes (above), endive, spinach and pak choi.
RIGHT now we are starting off many of our most important crops and flowers of the year in pots and trays of compost. The type of compost you use and its quality will not only determine the size and health of the harvest or flower performance, but equally could destroy it entirely!

Don’t use potting or multipurpose compost for sowing seeds – it has too much fertiliser in it. The fertiliser in this type of compost may start to break down and poison the delicate new roots of seedlings, rather than feed them. I find I have more success when I use a proper sowing compost (which is designed to be low in nutrients). Once germination has occurred, I prick out the seedlings into potting or multipurpose compost, when they are stronger and more able to cope.

Bags of packed down compost become anaerobic (lacking in oxygen), so correcting this is important — more so for sowing compost, but also for potting and multipurpose. Sieving compost into trays will help re-introduce air, which seeds need to germinate and grow.

Never ‘help’ by adding fertiliser of any sort to a sowing compost (though I find a little coarsely ground charcoal helps with known-to-be-slow seed).

You can add long-term fertility, such as bone meal to most other composts, as this is expensive stuff and seldom included generously by the compost producers. However, I reckon most potting and multipurpose composts are better improved by mixing with leaf mould and sieved garden compost. These supply active humus, important soil micro-life and minerals really feeding the plants. Unfortunately there are usually loads of weed seeds, too. Thus, I pot with this mix but add half an inch of the unimproved stuff to the surface to stop weeds.

Not only do I reckon the mix is better for the plants, but it’s also heavier and so pots stay upright more easily.

The quality of your chosen seed compost will determine the quality of your eventual harvest.
The theme for 2016 is the ‘Golden Age.’
It’s been our ‘Golden Age’ at Bakker
for over 70 years.

The ‘Golden Age’ was the period when the Netherlands flourished
with a growth in trade and commerce, science and art. During the
last 65 years Keukenhof has grown into a world-famous attraction.
And one for which we have been proud to sponsor.

During this period Bakker Spalding has been working hard to find
ways to add colour, sparkle and originality to your gardening
endeavours. Seeking out the bulbs that will amaze you – both for their uniqueness
and their quality. Then by making sure to stock huge ranges and quantities to meet
your demands. And always offering our customers a ‘Golden Service.’

Delivering the very best product experience - right to your door!

Our reputation is built on the consistent delivery of high-quality, fresh flower bulbs,
roses, perennials, seeds, garden products and hardware, including many new and
exclusive lines - direct to your door by post!

Market leading special offers and FREE gifts!
Bakker Spalding continues to deliver amazing price led offers combined with
practical and ornamental FREE gifts for your garden and patio - unbeatable value!

REQUEST YOUR FREE GARDENING CATALOGUE NOW:

DELIVERING EXCELLENCE FOR OVER 70 YEARS

With 70 years experience of supplying directly to the public, we are the UK’s mail order garden specialist.

Bakker Spalding Garden Company, Company Registration 02306169, located at Four Seasons House, Enterprise Way, Finchfield, Spalding, PE11 3YR.
Amphibious visitors

Frog spawn is a sign of Spring says Graham Clarke

We’re entering a new breeding year for all those amphibious creatures in our garden ponds. First to begin their spawning rituals are frogs – probably one of the most welcome as they roam the garden, devouring slugs and other pests in their wake. Clumps of frogspawn will start appearing any time from now onwards.

Even in what still seems like the depths of winter it always surprises me that the jelly-like spawn can become frozen at the pond surface, yet it doesn’t seem to impact on the number of tadpoles you see swimming around a few weeks later. The answer lies in the fact that being frozen almost certainly does kill spawn, but any under the ice should survive if it’s in deep enough water.

Toads are probably still in hibernation and you’re unlikely to see them active for a few more weeks. They can hibernate up to a mile away from the spawning pond, surviving winter under piles of leaves and holes in the soil. But watch out mid to late spring for the strings of eggs when they can be seen wound around submerged pondweed.

I have to say, though, that my favourite forms of pondlife are the newts. Smooth, crested and palmate newts are shy, secretive, lizard-like creatures – but they are just as beneficial as frogs and toads in terms of eating garden pests. Currently hibernating amongst pondside vegetation, or under large, flat stones, they’ll be laying their eggs in a month or so individually, in the pondweed.

Spot the difference

DO greenfinches visit your garden? Their big, solid beaks and green-brown colouring (with yellow edges to the wings and tail) give them an air of importance. Take another look though because your greenfinches could be siskins! The female siskin, particularly, is very similar to the greenfinch, with its yellow tail edges. Siskins are also usually smaller, and tend to inhabit woodlands more than gardens.
Long-lasting Mixed Geraniums

48 Mixed Geraniums for only £13.90

PLUS 48 extra FREE!

Pretty as a picture in pastel shades, our Mixed Geraniums are among the easiest plants to grow and the longest flowering. Their cheerful clusters of flowers will produce wave after wave of colour right through Summer and beyond. Plant in a sunny position in beds, baskets or containers and enjoy a non-stop show from the star of the summer garden.

Why choose... Mixed Geraniums?

✓ Long flowering season from early June to late September.
✓ Thrives in most conditions, low maintenance and drought tolerant.
✓ Height and spread 30cm (12ins).
✓ Delivered from late March for immediate potting on.
✓ Plants arrive as medium plugs approx. 5-7cm tall (2-3ins) from root to tip, with planting instructions.
✓ Refund or replacement guaranteed in the unlikely event that your plants fail to grow satisfactorily, given reasonable care and attention.

FREE Trial Pack of Emii Foundation!

Our NEW biological gardening product that you simply dissolve in water and add to soil to strengthen your flowering plants.

9 Cell Plug Trays & Watering Kit

Each kit contains: 2 x watering trays, 2 x capillary mats, 12 x 9 cell plug trays.

FREE Trial Pack of Emii Foundation!

How to get the most out of your French marigolds

With their origins in Mexico, French marigolds are half-hardy annuals, meaning they are frost-tender and complete their germination, growth and seed-setting in one growing season. ‘Naughty Marietta’ is an old favourite, reaching 10in (25cm) high, with masses of single flowers to brighten up greenhouses, borders and pots.

Large seeds are almost impatient to germinate and plants grow fast, so you might wonder why they are a February free gift. The answer lies in their distinctive smell which acts as a deterrent to whitefly, a troublesome sap sucking pest, especially under glass.

The strong aroma overwhelms and disguises that of tomatoes and other plants, so the flies fail to home in on them. Sow your marigolds now, let them grow alongside tomatoes and they will quietly protect them. When introduced after an infestation of whitefly has broken out, marigolds are less effective.

Aftercare
When roots appear at the sides of the Jiffy-7 net, plant or pot the young marigolds without delay. So far, they’ve enjoyed the benefit of growing and developing in their own space without competition or disturbance.

When roots appear at the sides of the Jiffy-7 net, plant or pot the young marigolds without delay. So far, they’ve enjoyed the benefit of growing and developing in their own space without competition or disturbance.

Technically, roots should grow seamlessly out into surrounding soil or compost but I tear the net away. Pot into 3.5in (9cm) pots and then into greenhouse beds; singly to 6in (15cm) pots or three to a 10in (25cm) pot. Water well and give fortnightly liquid feeds for flowering plants.

Other methods
To use French marigolds as bedding plants outdoors, sow again at the beginning of April. Under glass, they don’t require extra heat and germinate readily in modules or a seed tray, with seedlings transplanted one per 3.5in (9cm) pot.

Plant out 8in (20cm) apart after the last frosts (usually the end of May). If you have no greenhouse, sow in a tray outdoors or even direct into moistened seed drills.

SLUGS and snails can be troublesome. One method is to apply the biological control Nemaslug (above). Microscopic worm-like creatures enter the slugs, infect them with a bacteria and then feed on them after they’ve died. Nematodes remain active for six weeks but can help to reduce slug populations into the following year.
Step-by-step: sow French marigold ‘Naughty Marietta’

1. Soak Jiffy-7 coir pellets in water until they have swollen fully (soak the same number of pellets as plants you intend to sow). Pick them out and prop them up together in a seed tray.

2. Using a dibber, widen the dimple at the centre of each swollen pellet and drop a seed in. If you want to be double sure, put two in and remove one seedling after germination.

3. Push compost back over the seed, water in lightly to settle and place them in a warm propagating case (15-18°C/60-65°F). Lift out as soon as they have germinated.

How to start your poached egg plants

This wild flower of California and Oregon is a hardy annual, also used as a companion plant. White flowers with sunny, yolk-coloured centres attract pollinating insects like bees and hoverflies (whose larvae eat lots of aphids).

I scattered seed onto a patch of soil in our kitchen garden many years ago and have never had to sow it again. Seed falls in summer, germinates in August and September and the plants replace themselves every year, rarely spreading further.

Poached egg plants: sowing and growing tips

- Sow under glass now. Select a pack of modules with cells 1.5-2in (4-5cm) square, fill with multipurpose compost and sow three seeds to each cell. Leave on staging to germinate in natural temperatures, grow on, harden off and plant a trowel length apart.

- To cheer up your greenhouse, pot three cells of plants into a 6in (15cm) pan (shallow pot) of 50:50 John Innes No 2 and a soilless compost. Display on the staging.

- You can also sow direct to the soil. In March, or when weed seeds begin to germinate (indicating that soil has warmed-up and dried out), rake good soil in a mainly sunny position to a fine surface ‘tilth’. Scatter seed thinly and evenly and then rake in lightly. But if the ground is dry, make parallel drills 4-5in (10-13cm) apart, soak the bases and sow into these. Thin out seedlings so they are at least 4in (10cm) apart and water during dry spells. Direct sowings also work well in September when soil is warm and moist.
Rhubarb Poulton’s Pride — the world’s first long cropping rhubarb!

Harvest for ten months of the year!

Named after D.T. Brown’s Lancashire ‘birthplace’ of Poulton-le-Fylde we are delighted to present Poulton’s Pride — the first ever long cropping rhubarb! By breaking the summer dormancy (absolutely no genetic modification involved) our growers have produced a variety that carries on cropping right from February (if forced) to November! For length of cropping and intensity of flavour we consider this variety to be superior even to rhubarb Livingstone ... with a unique flavour with traces of almond, pineapple and banana backed by just a hint of that characteristic sharpness that rhubarb lovers so enjoy; Stock is limited in this first year, so please order today to avoid disappointment.

- Plants delivered from early June as well established plants in 9cm pots
- The longest cropping rhubarb ever
- ONLY AVAILABLE from D.T. Brown
- Delicious in crumbles or stewed with custard or ice cream

The Easy Way to Grow ... Rhubarb

1. Delivered as 9cm potted plants ready for immediate planting.
2. Plant in moist, fertile soil in a sunny spot and keep well watered and fed.
3. Harvest as early as February (if forced) and continue through to November.

Now is a great time to buy and plant both potted and bare-root hedging plants.

The benefit of buying bare-root is that you can inspect the roots.

Soak roots before heeling in.

Heel in at a 45 degree angle and protect plants from rabbits!

Shopping for hedging plants

Tamsin invests in bare root and potted specimens

The gardens here at Stockton Bury are surrounded by a working farm and we are fortunate enough to have borrowed views of the countryside. This allows us to plant hedges in the surrounding fields to block out or emphasise what the eye can see. From the Dingle Garden the view looks out over the polytunnel, which I plan to disguise by planting a native hedge of beech (Fagus sylvatica). I’ve also invested in some Thuja plicata to screen the wheelie bins and some potted holly to fill in gaps around the boundaries.

Hedging is reasonably priced if purchased bare root in the dormant season. In fact, I estimate you’ll pay around 50% less than the price of potted specimens. I buy trees locally at specialist nursery Frank P Matthews in Worcestershire. They stock bare-rooted plants from mid-November until March and potted specimens all year.

Once back in the garden my selection of bare-rooted plants have their roots soaked in water for an hour and are then heeled in. I’m planning to plant quite soon, so they have been heeled into the south-facing kitchen garden still in their bundles. If you can’t plant for over a month after buying then divide the bundles and heel them into a north-facing spot to keep them dormant for as long as possible.

Tips for wet weather gardening

HEREFORDSHIRE is renowned for its high rainfall. But, when possible I continue to garden. If you’re like me and aren’t put off by the wet you need to be cautious as you can do more harm than good. Here are my wet-weather gardening tips:

- Remove saucers under pots and raise pots on pot feet or bricks to aid drainage.
- Unblock garden drains. You would be amazed how efficient a couple of leaves are at blocking them.
- Move containers under the eaves of the house to shelter them from the worst of the rain.
- If you are working on your knees wear knee pads over your trousers and then put waterproofs on top. This avoids working from a wet kneeling cushion.
Replace worn turf

Buying, laying and repairing lawn ready for the new season

The gardens at Stockton Bury are open from April and hundreds of enthusiastic feet eventually cause damage to the lawns. So now’s the time that we make repairs. Having just lifted turf to increase the size of a border we’re making good use of it. Ideally turf should be laid as soon as it has been cut or delivered. Turfing can be carried out at any time of year, but avoid frost and dry weather. It’s been really mild and moist here, so it’s an ideal time.

We’ve skimmed off the old turf on a well worn path by cutting it into squares with a half moon and then lifting with a turfing iron (doing it without one of these tools can prove a little tricky). Once lifted, loosen the soil area with a garden fork and then level and slightly compact it with a garden rake. Remove any stones.

If buying turf the standard length of a roll is about 5ft 4in x 1ft 3in (165cm x 40cm). This is cut to fit with a half-moon edger. As we’ve lifted our own turf it’s a case of filling the space with odds and sods. The benefit of using home-grown turf is that it is likely to be a very good match and it’s free! Start laying from the straightest edge, placing a board over the area you’ve just laid. Ideally stagger the joints. Once your jigsaw is complete, place a board over the turf to stand on and tamp it down with a garden rake. Try and stay off the area until it shows signs of growth.

Keeping birch trees in top shape

Caring for birch is as simple as picking up sticks

At the far end of the garden a group of mature silver birch (Betula pendula) create an open boundary that offers wind protection. However much I adore these trees, with their warty white trunks, they shed barrow loads of twigs at this time of year. After collecting the twigs they are stored in a dry place and later used to light the wood burner.

This is the time of year when many shrubs are being pruned. The birch doesn’t need this but if you wish to keep them to a certain size and shape, hold off with the pruning saw. This is because the pressure of sap is high as we approach spring and birch can bleed when pruned. Old advice was to seal the wounds but it is now thought better to leave cuts to heal as open wounds. If you are planning to prune your birch wait until late summer when bleeding will be reduced.

Numerous twigs shed by the birch are dried and used to start the wood burner.

Tamsin Westhorpe is a trained horticulturist, writer, lecturer, magazine editor and former deputy editor of AG who now gardens four acres at Stockton Bury Gardens in rural Herefordshire.
Gardening Week
with Tamsin Westhorpe in her country garden

Last chance to tidy water features

OUR Dingle Garden is home to some man-made streams. In winter the pumps are turned off and we clean out the leaves and pond weed — a cold job but rewarding. Weed, cobbles and leaves are removed from the stream and placed just beside it. It’s vital to leave the debris by the stream for 24 hours so any pond life can creep back in (if you have fish they should be placed in a holding tank of pond water). The water from very muddy, silty pools is scooped out, weeds removed and then the stream cobbles replaced.

In such a narrow stream, silt can take over, so this mucky task avoids the small pools turning from pond to bog garden. Larger ponds are best cleared out in autumn. Crack on with this task now before frogs arrive to breed. If they’ve already arrived you’ll have to leave it.

Clear those gutters

IT’S a regular task to keep gutters clear on our garden sheds and feature buildings here at Stockton Bury. In order to prevent the gutter from breaking under the strain we clear them about three times a year. The leaves and moss collected have usually started to break down and are a very useful addition to the compost heap.

I prefer to place the gutter contents into a black plastic bag, add some deciduous leaves and then tie the top of the bag. I then punch a few small holes in it and leave it in an out of the way place. Every so often I turn the bag the other way up. In about eight months the contents are miraculously turned into a leaf mould. So there is gold to be found in them there gutters!

Protect clematis

AS it’s been so mild, many of our 50 clematis have started to produce new shoots. It’s vital then that any stems found sprawling across the ground are lifted and supported, otherwise the shoots will be nibbled by the voles we seem to attract here. Nocturnal voles are active feeders all year, also feasting on pea seedlings and strawberries. If I spot them eating my favourite clematis, Clematis tangutica ‘Bill Mackenzie’ and C. jackmanii there’ll be trouble.

New shoots need to be protected from voles
Nerine bowdenii Blanca Perla

- Excellent cut flowers too
- Loves poor soil in dry conditions
- Height 45-60cm (18-24”), spread 35cm (14”)
- Supplied as large bulbs – size 12/14
- Hardy perennials delivered in 14 days

It is said that the flowers drifted across the sea from South Africa, eventually landing on the island of Guernsey, and therefore named in reference to the 50 daughters of the sea-god Nereus. Nowadays, Nerine are the darling with contemporary floral designers. Gloriously striking sprays of up to ten lily-like flowers with wavy re-curved petals appear on erect leafless stems in autumn. Strap-shaped foliage develops in the spring and will form impressive clumps over time. Grows best in very well-drained soil in full sun.

JUST a few decades ago, all gardeners – both professionals and amateurs – would be outside putting in bare rooted plants at this time of the year. They would do so fully expecting these unprepossessing clumps of leafless sticks to put down roots and get off to a great start once the weather warmed up.

Bare root plants are grown in open ground and lifted while dormant, with virtually no soil around their roots. They can be purchased and put into the garden at any point while they are dormant. In the case of deciduous plants this is generally the period between late autumn and March or April when they’re without their leaves. Once they’re in the ground they need very little attention other than a spot of water during dry periods.

Thompson and Morgan’s horticulture expert Kris Collins says: “They simply don’t know they are being lifted and transplanted. They’re taken out of cold soil and put back into cold soil elsewhere while they’re dormant; they essentially sleep through the process,” he explains. “There’s no transplant shock, they don’t lose moisture through transpiration and they get off to the earliest start as soon as temperatures rise enough to initiate growth.”

Another advantage to be had from buying bare root stock is the sheer choice it offers. Most nurseries offer a limited range in pots but can easily dig up and despatch less well known cultivars as bare roots over the winter months.

Rose expert Michael Marriott from David Austin Roses says: “we have a relatively smaller list of 150 or so containerised plants, whereas we have 700 different varieties in total.”

As if all this were not enough, bare rooted plants are usually cheaper than their potted equivalents because growers are able to save on the costs of compost, pots, and postage.

“So, with so much going for planting bare rooted stock, why aren’t we all doing it now? The answer lies in the arrival of containerised plants some 30 years ago. These specimens, all neat and tidy in their plastic pots, can be planted at any time of year.

Unlike bare rooted plants, they don’t have to go into the ground straight away, and, more often than not, they’re out on display when they have an attractive flush of leaves, and even flowers, which makes them easy on the eye.

The truth is, we’ve grown so used to the convenience of buying plants in pots that we’ve fallen out of the habit of ordering and planting bare rooted specimens over winter. “Until the last 20 years or so it was normal to buy trees as bare rooted subjects,” explains the Royal Horticultural Society’s chief horticultural adviser Guy Barter. “However, the inconvenient seasonality of bare root plants does not sit well with modern trends in landscape construction, garden centre merchandising, the desire for instant gardening and the rise of the cash and carry outlets catering to landscapers.”

Perennials expert Claire Austin well remembers the years when buying bare roots was the norm. “Thirty years ago, or so, there were no plastic pots; when containerised plants first started appearing they were sold in poly bags,” says Claire, who still sells peonies bare rooted.

“Buying bare roots is the same principle as when you have something in your garden that you want to divide. Bare rooted plants purchased from nurseries tend to be bigger plants than those sold in pots, and it’s easier to check them for pests and diseases too.”
Top 18 bare roots to plant out now

Lily of the Valley
Plant the roots (sometimes described as ‘pips’) of *Convallaria majalis* in moist soil in partial or full shade between now and late March to enjoy the sweet scent of this pretty flower in May. The rest of the year the foliage provides useful groundcover. **Supplier:** Unwins ☎️ 0844 573 8400, unwins.co.uk

Peonies
Steal a march on container-grown peonies by planting bare rooted specimens, which often go on to produce flowers within a season or two of planting. Buying bare rooted often results in acquiring bigger plants than their potted equivalents too. **Supplier:** Claire Austin ☎️ 01686 670 342, claireaustin-hardyplants.co.uk

Rose
Bare rooted is the traditional way to plant roses, and they’re cheaper than potted specimens to boot. They will establish quickly and should flower in the first year. **Supplier:** David Austin Roses ☎️ 01902 376300, davidaustinroses.co.uk

Astrantia
Enliven a sunny or shady border throughout the summer with the pincushion flowers of this old cottage garden favourite. Flower colours range from white to dusty pink through to plum purples and sultry reds. **Supplier:** Van Meuwen ☎️ 0844 557 1850, vanmeuwen.com

Angelica gigas
These impressive plants add height and drama to the borders, and are popular with bees and butterflies; their stems can even be used in cooking! Seed germination rates can be erratic, so it’s definitely worth growing angelica from bare root plants. **Supplier:** Unwins ☎️ 0844 573 8400, unwins.co.uk

Apples
It’s worth getting expert advice on the best types for your garden, bearing in mind choices of root stocks and your soil type. Many are generally grafted stock that are sold in pots, but bare rooted plants are also available. **Supplier:** Orange Pippin Trees ☎️ 01759 392007, orangepippintrees.co.uk

TopTip
Plant trees and shrubs to the ‘tide mark’ that was created when they were growing in the ground
**Top 18 bare roots to plant now**

**Damsons, plums and gages**
Members of the prunus family are happier grown in the ground rather than grafted and in pots due to the need for their sap to move freely, so should always be planted bare rooted. Most varieties are self-fertile.

*Suppliers: Grow Brogdale © 01795 531888, brogdaleonline.co.uk; Ken Muir ©01255 830181, kenmuir.co.uk*

**Geranium psilostemon**
Plant a root in winter and marvel at the speed at which it will cover a bare border with its bold magenta-coloured flowers. It offers another season of interest too, with the large mid-green, deeply cut leaves turning a dazzling red during autumn.

*Supplier: Claire Austin © 01686 670 342, claireaustin-hardyplants.co.uk*

**Persicaria ‘Firedance’**
Get ground covering clumps of rich red flowers between July and November from this “well behaved” persicaria. Good with grasses and late summer flowers like heliolum and sedum. Will grow in full sun or part shade, but needs moist soil.

*Supplier: Toby Buckland Nurseries © 01626 891133, tobybuckland.com*

**Raspberry**
Both autumn and summer fruiting varieties can be planted now for delicious berries from June through to October. They will need a sunny spot and fertile soil. Summer varieties require supporting but autumn types are usually fine without.

*Supplier: Thompson & Morgan © 0844 573 1818, thompson-morgan.com*

**Hosta**
Plant with a good helping of garden compost – you’ll get thick, lusher leaves if you keep hostas well fed. They need shade and moist soil. There are hundreds of varieties of hostas to choose from so there’s one for every garden.

*Supplier: Sue Proctor Plants © 01484 866189, sueproctorplants.co.uk*

**Phlox paniculata**
Add colour and enchanting scent to a summer border by planting these beautiful mid-height perennials. Choose from violet to lavender purple, white, pink or orange-red. Attractive to bees and butterflies and tolerant of all soils, sun or shade.

*Supplier: Hayloft © 01386 562999, hayloft-plants.co.uk*

---

**TopTip**
If the ground is frozen, store your bare roots (still in their bags) for up to 10 days in a cool shed.
**Papaver orientale**

‘Patty’s Plum’, ‘Perry’s White’ and ‘Turkenlouis’ are the stand-out varieties. Because bare roots are the cheaper option, why not go for a selection? These perennial poppies with large ruffled blooms will come back year after year.

*Supplier:* Jersey Plants ☎ 01534 871 113, [jerseyplantsdirect.com](http://jerseyplantsdirect.com)

**Box (Buxus sempervirens)**

Evergreens such as box can be planted as bare roots, whether as standalone shrubs to grow on for topiary or for hedging. Preshaped box topiary is expensive, so it’s worth considering the bare root option and creating your own.

*Supplier:* Hedges Direct ☎ 01257 263873, [hedgesdirect.co.uk](http://hedgesdirect.co.uk)

**Beech (Fagus sylvatica)**

Bare root beech are cheap and generally establish better than potted specimens. These beautiful hedging plants are grown for their fluttery soft green leaves that turn a coppery colour in autumn. A great alternative to evergreen hedging.

*Supplier:* Hedges Direct ☎ 01257 263873, [hedgesdirect.co.uk](http://hedgesdirect.co.uk)

**Amelanchier lamarckii**

A great ornamental tree for a small garden. Amelanchier produces pretty white flowers in spring along with young coppery foliage, which turns a glorious purple-red in autumn. Can also be used for hedging. Grows to around 13ft (8m).

*Supplier:* Mail Order Trees ☎ 0800 066 5972, [mailordertrees.co.uk](http://mailordertrees.co.uk)

**Strawberry ‘Mara des Bois’**

Plant this chef’s favourite now in containers or the ground to enjoy crops of this intensely flavoured perpetual-fruiting berry during the summer months. Often found in French markets, it’s a favourite among connoisseurs!

*Supplier:* Fothergill’s ☎ 0333 777 3936, [mr-fothergills.co.uk](http://mr-fothergills.co.uk)

**Asparagus**

Why pay for expensive supermarket asparagus when you can grow your own? Plant roots – known as ‘crowns’ – in a well-prepared, weedless area of soil. Resist temptation to harvest spears in the first year so that energy goes into the plant.

*Supplier:* Thompson & Morgan ☎ 0844 573 1818, [thompson-morgan.com](http://thompson-morgan.com)
Council jobsworths ordered an 89 year-old pensioner to trim back his 328ft (100m) historic hedge, because of barmy health and safety fears.

Roy Dowson was told to cut the yew hedge, originally planted 140 years ago and presently over 8ft (2.5m) high, after pedestrians allegedly complained that there wasn’t enough room to walk along the pavement.

Officials from Lincolnshire County Council descended on the sleepy village of Burton-by-Lincoln, Lincolnshire, last month and ordered Roy to axe the hedge by 24 February.

Slow-growing
But the pensioner, who has his pristine hedge trimmed every year, says cutting it back to the wall would ruin it.

He said: “It will absolutely wreck it. This hedge has been at the property for 40 years. They are making a mountain out of a molehill.”

His daughter, Heather Dowson, added: “Yew is slow growing and it will take a while to look any good if it’s cut down.”

The hedge was first planted in 1880 and is a feature of Burton-by-Lincoln, a village that features in the Domesday Book.

Councillor John Copeland is supporting Roy and said to cut back the popular hedge would be “environmental vandalism”.

He added: “You can easily walk along the path and this hedge is a lovely feature of the village that should be looked after.”

But Lincolnshire County Council insisted that the hedge was putting people at “risk from passing traffic”.

Several complaints
Paul Little, highways network manager north, added: “We had to ask a resident to cut a yew hedge back to ensure the safety of pedestrians wishing to use the pavement.

“The hedge is encroaching over half of the pavement in places, and we’ve received several complaints from pedestrians who have been forced to walk in the road in between two blind bends.

“This is putting them at unnecessary risk from passing traffic,” Paul argued.

Schools set to grow rocket seeds from space

GREEN-fingered UK astronaut Tim Peake has helped to inspire kids to take-up gardening – by sending a message from the International Space Station (ISS).

Backing an initiative by the RHS Campaign for School Gardening and UK Space Agency, Tim appeared in a video from the ISS. He floated in zero gravity with rocket seeds that, when they return to Earth in March, will be distributed for half a million young people to grow.

Tim has already coaxed a zinnia into flower on the ISS, over 200 miles above Earth, while orbiting the planet 16 times a day at over 17,000 miles per hour.

Speaking from space, Tim said: “Conditions on the ISS are very different from planet Earth, due to us being weightless in orbit. This experiment will aim to see if micro-gravity will affect the growth mechanisms of seeds.”

In April, up to 10,000 schools will grow the 2kg of seeds that have been in space since September, alongside rocket seeds that have never left the planet, in a national experiment.

https://schoolgardening.rhs.org.uk/Competitions/Rocket-Science-Application-Form to apply for seeds from space.
Charlie Dimmock prunes the cost of gardening in deal with Poundland

TV gardener Charlie Dimmock has been signed-up by High Street discounter Poundland to bring out an exclusive gardening range. Charlie, the former Ground Force star, is launching her range at Poundland’s 900 UK stores from 29 February.

It will feature 130 lines, including hand tools, a hanging bird feeder, gloves, pressure sprayers, wooden signs and solar lights – all priced at £1.

**Affordable**
Charlie’s former Ground Force co-presenter Tommy Walsh already has a DIY tool range exclusively with Poundland.
Charlie said: “I’ve been involved with the production and creation of my range, personally testing every item to ensure practicality and quality. “From gardening gloves and trowels to watering cans and shears, all at £1, it’s affordable for everyone.”
She added: “With so many Poundland stores in towns and cities, they are much handier to get to than out-of-town garden centres.”
Poundland chief Jim McCarthy said: “Customers told us they would love to do more gardening, but the cost and sometimes lack of expertise puts them off. “The introduction of this new range, and with Charlie’s expertise, will help encourage more people to take-up gardening which is affordable and enjoyable.”

Novelties kick-start Year of the Cosmos

SEED companies are unveiling new varieties to help gardeners celebrate the Year of the Cosmos during 2016.
Mr Fothergill’s, based in Newmarket, will exclusively launch Cosmos ‘Hummingbird Pink’ which is smaller than most cosmos, reaching just 18in (45cm) tall.
This makes it suitable for containers, as well as borders. A packet of seed sufficient for 20 plants costs £2.15. Visit mr-fothergills.co.uk for more details.

Thompson & Morgan of Ipswich sold more than 117,000 packets of cosmos across 40 varieties last season, proving that demand is strong for the popular garden plant.
T&M, along with other suppliers, will introduce Cosmos ‘Xanthos’ this spring.

Horticultural director Paul Hansord said: “We’re expecting big things from ‘Xanthos’ during 2016. Yellow is a much sought-after colour in the genus.”

T&M is offering ‘Xanthos’ at £2.49 for 30 seeds or £11.99 for 25 plug plants. The firm will run a ‘Cosmos Carnival’ campaign this season to promote cosmos to gardeners.

Gardener turfed off over ‘messy plot’

A GARDENER who tended his allotment as a respite from caring for his sick wife has been kicked off after 25 years amid claims that his plot was too messy.

Paul Burton, 70, struggled to keep on top of his 300m² plot during the wet December. But the grandfather claims it’s just an excuse to boot him out, freeing up his plot for a waiting list.

Disgusted
Paul said: “We had the wettest December on record — sometimes digging just wasn’t possible. I’m disgusted. I’ve been bullied.”

Retired Network Rail supervisor Paul had rented his allotment from the Stoke Road Allotment Association in Bletchley, Buckinghamshire, since 1990, at a rate of £19.50 a year. He grew runner beans, peas, potatoes, swedes and blackcurrants.

Paul admitted being sent a letter in November 2014 asking him to clean up his allotment, and said he rotavated his plot. He then received two letters in November and December last year, asking him to tidy up, but was hampered by weather. On 3 January he was given just two weeks to vacate his beloved patch, before being turfed off for good.

Paul said: “I enjoyed it. I have been going for years and it’s got a great atmosphere. We all help out. It was a big part of my life.”

Lisa Cameron, secretary of the Stoke Road Allotment Association, said Paul’s plot was a “hazard to wildlife” because he had metal, wood, plastic and polythene bags lying around, which could have harmed newts and grass snakes. She said: “All residents have to adhere to the same rules. The association will not be bullied.

“He was warned about this for months but rather than work his plot, Mr Burton has spent all his energy fighting against the committee. I am aware he feels victimised, but I have had to issue 20 per cent of our plot holders with letters. All bar Mr Burton have actioned the requests.”

Could you create a ‘feel good garden’ for Hampton Court?

BBC local radio listeners are being invited to compete for a chance to design a garden at the world’s largest annual flower show.

England’s 39 BBC local radio stations have teamed up with the Royal Horticultural Society to run a challenge that will see successful listeners design ‘Feel Good Front Gardens’ at the RHS Hampton Court Palace Flower Show on 5-10 July.

Health and wellbeing
Amateur gardeners and aspiring designers can submit a front garden design (20x13ft/6x4m) that “celebrates their community and highlights the health and wellbeing of gardening”. Entrants should tie in a link to their local area, for example, local heritage, buildings, food, people, plants or an aspect of life in their region.

They will not have to fund the “up to £5,000 cost” of creating the gardens.

Four winners will visit RHS Chelsea, where they will meet their mentors: garden designers Ann-Marie Powell and James Alexander-Sinclair.

Hampton Court visitors (pictured) will vote for their favourite garden at the show.

The closing date for entries is noon on 26 February. Go to bbc.co.uk/localradiogarden for entry details.

Brits urged to ‘Love our spuds’

A NEW website aims to encourage Brits to grow their own potatoes in gardens and on allotments.

The site, called thepeoplespotatoes.com, has been set up by spud expert Alan Wilson, a technical manager at Waitrose who has been growing potatoes for 38 years.

It features his 25 top varieties, video growing tips and a potato quiz. Alan said: “We have become disconnected with the land, and with it our love for the potato has been tarnished.

“This website is about how we can act today and enjoy great potatoes and get eating them again.”
Fleece Lined Action Trousers

Comfort and Warmth all through the Winter!

Don’t get caught out this winter so hurry and make the most of this amazing SEASONAL OFFER for Chums Fleece Lined Action Trousers, all sizes are now just £19.99 each with savings of up to £15 per pair!

Just look at the incredible value for money and very special features – these Action Trousers are lined with a cosy fleece lining, for total comfort and warm ideal for the cold winter months. Multi zip trousers with no less than 7 pockets mostly with zip fastening for added security, just the job when working outside, days out or just for around the house. Zip front fastening with a discreet side elastication waist provides extra growing room for the ultimate in comfort. Tailored in machine washable outer - 65% Polyester, 35% Cotton with a Polyester fleece lining, available in a choice of 4 colours Airforce, Olive, Navy or Black, a selection of sizes from 32” to 48” and in 4 inside leg lengths 27”, 29”, 31” & 33”.

Battling a vine weevil infestation

Q My patio garden is infested with vine weevils, and nothing seems to be working against them. I’ve tried everything - so what else can I do?
Jo Nunn, Salisbury, Wilts

A Use a combination of methods to get the situation under control. Start by scrubbing out containers to get rid of vine weevil eggs, and use fresh compost. Adult weevils usually feed in the evenings during spring and summer, and can usually be spotted by torchlight. They tend to drop to the ground if disturbed so might require a bit of hunting out!
Ornamental plants in containers can be treated with acetamiprid (e.g. Bug Clear Ultra Vine Weevil Killer) or thiacloprid (e.g. Bayer Provado Vine Weevil Killer) as a liquid drench applied to the compost. These insecticides give protection against the grubs for up to two and four months respectively, and treatment in summer will control larvae and prevent damage later on.
Neither product can be used on edible plants, or ornamental plants growing in open soil.
Try the nematode worm Heterorhabditis megidis, which likes temperatures of 12-20ºC/ 54-68ºF. Nematodes are safe on all edible and ornamental plants.

Why isn’t my Jersey lily flowering?

Q I bought three Jersey Lily bulbs two years ago, and potted them up as instructed. They have grown beautifully, but not flowered – all I have is a crop of leaves. What do I need to do to make them flower?
Sandra Shackcloth (via email)

A The usual reason for Jersey lilies (Amaryllis belladonna) failing to flower is that they are too young – bulbs have not matured and you may have to wait another year.
Meanwhile, I am delighted that a wealth of leaves has formed. I think you will find that your plants will perform this season. Blooms appear when the foliage dies back. Encourage your plants to flower well by feeding them with sulphate of potash at 1oz (28g) per sq m at monthly intervals from April to September. Repeat annually. This plant also needs a warm, sunny spot in well-drained soil.

Have I killed my ancient viburnum?

Q My Viburnum bodnantense, more than 30 years old, has died on me. Do such species have a life span, or have I done something to kill it?
Simon Lander (via email)

A The same thing happened to me. I pruned my plant, and it came back in spring, and then died.
I assumed I had killed it by pruning, but when I dug it out I discovered the roots had started to rot away. I hadn’t really observed an obvious decline in growth, but the degree of root decay suggested that much of the previous year’s growth must have been generated from energy stored in the branches.
It is fine for you to plant another Viburnum on the same spot, although I would remove the dead one first. Alternatively, you could use it as a climbing frame for something else!
The uses of an over-pruned Leylandii

Q My new house has a Leylandii hedge that the previous owners hacked into at one side, so it is no longer growing. Is there anything I can do to hide it, as I can’t afford to get rid of it?
D Evans (via email)

A I would grow climbers through the naked side of the hedge. The plants you choose will depend whether it faces north, south, east or west.
If it is sunny, then honeysuckle, clematis, passionflower, roses and ornamental vines would be suitable.
For a shady aspect, choose ornamental ivies, hops, shade-loving clematis, Japanese honeysuckle, or Virginia creeper.
The hedge will have taken water and nutrients out of the soil, so feed it and keep an eye on dryness.

Advice for growing an apricot tree

Q I want to plant an apricot tree in my garden. Do they have any specific requirements for good growth?
Alan Cresswell (via email)

A What a lovely idea! Apricots are hardy, but flower early in the season when there is still a risk of frost, so outdoors cropping isn’t always reliable.
The most practical way of growing apricots is as a fan against a south or west-facing wall or fence.
West winds can be strong, but they are not cold, and your tree will do better in a sunnier spot that helps wood and fruit to ripen. The ideal soil type is well-draining but moisture retentive. It is worth adding compost if you are planting in heavy clay.
Apricot flowers are self-fertile, so you only need one tree to get fruit. However, as it flowers early, there may not be enough pollinating insects around, so it is worth hand-pollinating the flowers using a small paintbrush.
Do this in the middle of a warm day, when the pollen is being shed freely.
You may need to do it more than once, as different flowers open at different times.

How can I save my peace lily?

Q The leaves on my peace lily have started to turn black. Will it recover?
Maureen Turner, Wakefield, Yorkshire

A It sounds as though your lily has been over-watered. The ideal winter temperature is 16–18°C (60–65°F), and in this environment it will need watering once a week.
Stop watering for at least two weeks, or longer if the temperature is lower, to let the compost dry out. You could replace some of the sodden compost with fresh. Still don’t water it though, to give the roots time to recover.
Feed it with a general-purpose liquid fertiliser fortnightly in the spring and summer.

Concerned about frosted hydrangeas

Q My container lacecap hydrangeas have never flowered, and their shoots and leaves are starting to turn brown after a frost. Will they recover?
Celia Barnes, Rotherham

A If you cut the shoots back to just above a joint, where the tissue is soft and green, stumps will regenerate.
Your plants haven’t flowered because they are hungry. Move them into a container 6in (15cm) larger in diameter than the current one. Put 4in (10cm) of John Innes No 3 at the base, nestle in the rootball, and infill with No 3 to within 2in (5cm) of the rim. Then water well.
**Ask Christine!**

Follow Christine’s Masterclass on growing tomatoes

---

**How can I avoid a tomato disaster?**

**Q** Last year was a disaster for tomatoes. They began well, but the leaves curled and discoloured. A lot of fruit split and rotted at the bottom. They caught blight. How can I prevent this happening again?

*Jay Davidson, Cheam*

**A** You do not mention if you were growing tomatoes in a greenhouse or outdoors, so I will offer general advice.

Regarding leaf discoloration, it may have been a virus, contamination of the soil, a lack of feeding, a mineral deficiency or cold temperatures early in the season.

As your plants went on to fruit, this suggests that it was a cultural problem rather than a soil contamination issue. Regular feeding with tomato fertiliser will help to prevent mineral deficiencies.

But magnesium deficiency can be induced by using too much fertiliser that is rich in potash, such as a tomato fertiliser. It is not uncommon to see both magnesium and calcium deficiency on the same plant, so this may have caused the discoloration.

It would have appeared as yellowing between the leaf veins, first on older leaves and then on younger ones.

Curling of tomato plant leaves in the absence of obvious damage or stress is quite normal on outdoor tomatoes. So I’m willing to bet that a mineral deficiency may have caused your problem.

Splitting of fruit is common in plants that have been allowed to become too dry and then watered again. If plants completely dry out, and are later watered, splits in the skin of fruit are often observed.

With regard to blight, there are blight-resistant tomatoes on the market, widely available from seed and plant suppliers, so give them a try. In my experience to date, they can still go down with blight, but not as quickly or to the same extent as non blight-resistant varieties.

---

**Prevent blossom end rot**

Your comments about fruit rotting sound like blossom-end rot (right). It’s a calcium deficiency, brought on by lack of water movement in the plant and irregular watering. Keeping the plants just moist and never letting them dry out can prevent this problem. If you grow tomatoes outside on light, sandy or acidic soil, incorporating plenty of well-rotted organic matter will help the soil to retain moisture.

---

**Christine’s top tomato tips**

- **Plan crops carefully**
  Blight breaks out in specific weather conditions — normally during damp growing seasons. It’s the same disease that causes blight on potatoes, so growing the two crops next to each other is not regarded as a good idea.

- **Grow toms under glass**
  Outdoor tomatoes are much more susceptible to blight than varieties that are grown in glasshouses. Although it’s not uncommon to see blight under glass, a greenhouse offers a degree of extra protection from the airborne spores.
Your Conservatory in February

Come rain or snow

Enjoy your garden from the comfort of your conservatory whatever the weather throws at you and it won’t cost the earth with a beautiful Rundle & Dorey insulated conservatory ceiling

- NO NEED TO REPLACE YOUR EXISTING ROOF
- NATIONWIDE SERVICE
- INSTALLED IN A DAY
- DRASTICALLY REDUCES RAIN NOISE
- SAVE ON HEATING BILLS
- NO PLANNING PERMISSION NEEDED
- CREATES EXTRA LIVING SPACE

Rundle and Dorey can convert your conservatory from an ice-box to a warm and cosy energy efficient 365 days a year living space by installing a 9cm deep insulated and plastered finish under-ceiling directly below your existing conservatory roof

With our 10 year Insurance backed warranty and government approved energy saving reduced rate of VAT at just 5%, you are guaranteed to be delighted

**Narcissus pseudonarcissus** *(Lent Lily)*

Famous poet Wordsworth once described them as flowers that flutter and dance in the breeze. This native daffodil has clear-white petals with creamy yellow trumpets in March. If left undisturbed, it is the easiest daff to grow for naturalising.

**Hyacinthoides non-scripta** *(English Bluebell)*

This quintessentially British native features powder-blue delicate bells which dangle from ink-blue arching stems in April and May. In time they will self-seed and create a stunning blue carpet. Need semi-shade and moist soil.

---

**Anemone blanda Mixed**

UK-grown and guaranteed to flower

Perfect for shady borders as well in pots, wood anemones *(Anemone blanda)* effortlessly signal the start of spring with their breathtaking carpets of daisy-like flowers in shades of pink, blue and white.

You can claim your **50 Free Anemone blanda bulbs** when you place an order for any of native spring bulbs listed below (daffodils, bluebells, winter aconites and snowdrops).

All bulbs are supplied in the green, which offers guaranteed success. This bulb selection comes exclusively for Amateur Gardening readers (whilst stocks last). Please note that postage costs £5.99 and plants will be with you in 14 days.

**Reader offer**

Tried & tested
We try before you buy

Fleece jackets

Grab a fleece and head outside, Consumer editor Julia Heaton has the low-down on six different styles to keep you warm.

A fleece should be light, durable and retain warmth if it's to work as the ultimate insulating layer of clothing. We've tested six ladies fleeces of various weights, all with a full-length zip for slipping on and off easily, and in a range of colours. Mens sizes are available in each.

We tested during a cold spell this January, looking for the obvious warmth factor and whether they moved fluidly and were comfortable to wear.

Made from 100% polyester all garments were washed following manufacturers' instructions for a warm and gentle cycle. On a 30˚C ’synthetic’ wash without conditioner two (‘Cathie II’ and the ‘Isle’) stayed the same.

Three (‘Heritage Fleece’, ‘Nevis’, ‘Magnolia Soft Knit’) were 1-2cm shorter and the ‘Willowbrook’ from Regatta stretched to 3cm longer in the arm.

Heritage fleece
£70 RRP

sprayway.com
for stockist finder

Features ★★★★★
This smart fleece jacket in fig has a ‘knit’ effect exterior and a micro fleece lined collar. Two zipped pockets and a chunky zip complete the look. Ladies sizes 8-20 are also available in blue. Mens version comes in grey. No hood.

Performance ★★★★★
Felt well made and didn’t restrict movement in the arms. Had the smoothest zip, and the neckline was generous when zipped right up. Its heavier weight felt snug and protected from the cold.

Value ★★★★★
Overall, a good jacket but the extra outlay doesn’t appear to give added value over some of the other fleeces.

Nevis Fur-Lined Hoodie
£24.99 +p&p £4.50 or free click and collect

mountainwarehouse.com

Features ★★★★★
Dark Teal with soft, cream coloured pile interior and close-knit exterior. Fur-lined hood and zipped pockets. Sizes 8-12 also in grey; or mens version (‘Glen’) comes in navy and charcoal.

Performance ★★★★★
Heaviest weight fleece that felt really warm and cosy, yet easy to move around in. Was also generous enough to wear another layer underneath. Its thickness kept the wind out and even shrugged off fine rain. The cream-coloured lining however is not that practical.

Value ★★★★★
Very comfortable with roomy pockets. It’s fur lining made all the difference.

Willowbrook Coral Blush
£60 +p&p £3.95

regatta.com

Humphries 12/15
Score 12/15

Nevis Fur-Lined Hoodie 13/15

Willowbrook Coral Blush 11/15

Features ★★★★★
Lightweight ‘knit’ finish with stretchy underarm, side panels and hood built into the collar, elastic hem and cuffs. Storm-proof zip, zipped pockets and zipped sleeve pocket. Sizes 12-20, also in black, blue and aqua. Mens (‘Columbus II’) in black, orange and green.

Performance ★★★★★
Good stretchy material that was close-fitting, practically weightless and the best for movement. But it was also the least insulating so more useful in the warmer months, or worn as an extra layer.

Value ★★★★★
Attractive stretchy, sporty jacket. Other colours reduced on the website.
**Westland Aftercut Patch Fix**

£6.99 TSP

- 01480 443789
- gardenhealth.com for stockists

Pet urine-resistant grass seed in a soil blend including lawn feed and a urine neutraliser, you’ll need this for patches where your pooch has already done their worst.

---

**Magnolia Soft Knit**

£50

- 01242 539535
- weirdfish.co.uk

Features ★★★★★
Lightweight fleece with a knit-effect finish, it has a hood with a pretty patterned fabric lining, small slit pockets. Available in sizes 8-20 in port, light cream and cantaloupe. Mens (‘Belze’) comes in black.

Performance ★★★★★
Quite a close-fitting garment and the hood gave that extra bit of comfort. Not as stretchy as some so more for garden visiting than gardening. Like the ‘Nevis’ fleece, it shrugged off rain well and the material didn’t show marks.

Value ★★★★★
Good all-rounder and versatile enough to be worn in winter or summer, but the pockets weren’t so practical for gardeners.

---

**Man’s best friend**

Dogs love the garden, so here’s some hound-friendly gear that’ll keep the both of you happy

**Dog Rocks**

£12.49

- 01628 822 243
dogrocks.co.uk

Burnt patches where your dog urinates on the lawn are always a bone of contention. Simply place a pack of Dog Rocks in your pooch’s water bowl, sit back and wait to see an improvement (in about 5 weeks).

---

**Get Off Lawn Rescue**

£6 in store or +£4.95 delivery

- 0800 328 4204
- petsathome.com

Simply spray to neutralize the acid damage caused by pet urine on lawns. Includes natural growth promoters and nutrients for faster re-growth.

---

**Cathie II**

£30 +p&p £3.95

- 0161 866 0486
regatta.com

Features ★★★★★
Mid-weight fleece with anti-pill finish, two roomy zip fastened pockets and adjustable cord hem. Sizes 8-26, also in a range of colours. Mens (‘Stanton II’) available in seven colours.

Performance ★★★★★
Generous proportions and cord tightening provided the cosiest feel, yet didn’t restrict movement. The soft hand-warmer pockets were an added bonus and the long cut back didn’t ride up during gardening. Didn’t bobble up after washing either.

Value ★★★★★
Versatile for year-round use and a good price.

---

**Isle Microfleece**

£12 +p&p £3.99

- 0808 202 0242

'Goldstar' is a favourite among show growers like Charles Massey for its size and flavour. “Always grow for flavour!” says Charles.

Charles cuts the top out of his cordon tomatoes once they reach the roof of his glasshouse.
Welsh grower Charles Maisey has been growing tomatoes for over 60 years. He shares his advice with Sue Bradley,

Another key to Charles’s success is the meticulous care he takes over the depth and quality of the soil he uses in his greenhouse. He starts by filling a trench with nine inches (23cm) to one foot (30cm) of well-rotted farmyard or horse manure.

Onto this he places a growing bag into which a large slit is cut on the underside to allow the roots of the tomatoes to travel. Planting rings made from florists’ buckets with the bottoms cut out are pushed into holes in the tops of the bags and filled with a high nutrient compost. Charles uses a mix of peat and loam-based products as he’s found peat dries out quite quickly, and he’s careful to top up the compost as the plant grows.

Experience has taught Charles to space out his tomatoes (no more than two plants per grow bag) to ensure they receive adequate air flow as this reduces the risk of diseases such as botrytis (grey mould) and blight. Watering takes place every three days, or more frequently if it’s exceptionally hot. Once the plants are established, Charles wets the manure layer under the growing bags rather than watering the base of the stem.

Feeding starts after the first truss of tomatoes are about the size of a pea, with a high potassium feed that’s given at half strength every time he waters his plants.

After a month Charles adds three further feeds to his regimen: solutions of nettles, sheep manure and soot, all of which are made in large barrels in his garden. “I feed these one after another through a small flower pot sunk into the top of the growing bag, and then start again.”

Charles has grown all kinds of vegetables successfully, including runner beans, for which he won six consecutive national titles. He was also the national champion for potatoes three times, but says tomatoes are always the top of the crops in his eyes.

“I could eat them every day: they’re very good for you,” he laughs.

Charles swears by Coleus canina, a member of the mint family that is often marketed as Scaredy Cat Plant, for deterring pests like white fly.

Pest control
Charles swears by his anthracite boilers for keeping his glasshouses free from winter chills. He fires them up from March.

Watering
Bring watering cans into the greenhouse so that the water inside them isn’t ice cold when it reaches the soil. Spray seeds with tepid water, too.

Pinching out
Pinch out the side shoots that appear just above the leaves on cordon tomato plants, so that all the goodness goes into the developing fruit.
AG recommends:

6 tasty cordon tomatoes to try

‘Shirley’
Said to be one of the nicest flavoured and textured tomatoes and a heavy cropper to boot. An old favourite.
Supplier: Marshalls © 0844 557 6700

‘Artisan Tiger Stripe’
As beautiful as they are delicious, this is a mix of striped tomatoes that will add a special touch to a salad bowl.
Supplier: Marshalls © 0844 557 6700

‘Capriccio’
A mini plum tomato with a flavour to rival traditional cherry varieties. More than average flowering trusses per plant.
Supplier: T&M: © 0844 573 1818

‘Mountain Magic’
A rich flavour combined with modern disease resistance makes this variety especially good in areas plagued by blight.
Supplier: Kings Seeds: © 01376 570 000

‘Akron’
A heavy weight tomato that was a top performer in trials at RHS Wisley. Kept cropping well into late autumn.
Supplier: T&M: © 0844 573 1818

Black Opal
Combines the unusual dark skin and health benefits of ‘Black Cherry’ with the high sugar content of ‘Sweet Aperitif’.
Supplier: T&M: © 0844 573 1818

‘Vilma’
Specially bred for growing in containers. Produces a heavy crop of cherry tomatoes over a long picking period.
Supplier: T&M © 0844 573 1818

‘Tumbling Tom’
Produces abundant early crops of yellow or red – sweet and juicy cherry tomatoes throughout summer.
Supplier: T&M © 0844 573 1818

3 sweet and juicy bush tomatoes

‘Apero’
A good looking and tasty cherry tomato. A regular variety on show benches and a supermarket favourite.
Supplier: Suttons: © 0844 326 2200

‘Vilma’
Specially bred for growing in containers. Produces a heavy crop of cherry tomatoes over a long picking period.
Supplier: T&M © 0844 573 1818

‘Tumbling Tom’
Produces abundant early crops of yellow or red – sweet and juicy cherry tomatoes throughout summer.

DREAMY DAHLIAS FOR YOUR GARDEN AND VASE

Easy dahlia displays with this collection of beautiful blooms.

Enjoy harmonious displays of plentiful summer blooms for both cutting and border. These plump dahlia are delicately blushed in shades of pink and violet, and these shifting pastel tones create a beautiful, fluid and serene display. The contrasting cactus and decorative flower forms work well together to create a well-balanced display in both the garden and the vase.

Dahlias are so easy to grow and so prolific, making them easily one of the most rewarding and worthwhile of our summer plants. With this tried and tested collection you can be sure of blooms which flower simultaneously and last well together in both border and vase.

The key to unrivalled summer long displays is simply to keep picking. Hand-graded and picked tubers are supplied from mid-March for potting on, although we find that planting direct into a sunny border once the frosts have passed gives better results. Half hardy, perennial.

Order Online at www.woolmans.com/W16DAAG1 or phone: 0845 658 9137* quoting W16DAAG1

Fuchsia devastation

I DON’T know if other AG readers have suffered in the same way as me, but the fuchsias in my garden in south London have been devastated by Fuchsia Gall Mite. They’re one of my favourite plants as they bring such brilliant colours to the garden from mid summer right up to the first frosts. Every time I went to a garden show I couldn’t resist buying a new plant.

Then last year I found new buds on my fuchsias were being horribly distorted, and I found out from the RHS that it was the dreaded microscopic mite.

According to their experts, there’s no known pesticide available to get rid of it, but a very cold winter might possibly kill it. If not, they said I should destroy all my fuchsias, something I can’t bear to do!

Apparently the mite’s presence was first discovered in Brazil, then it spread to California and on to Europe, reaching these shores in 2007.

Anthony Ogg, London

A tale of many tits

WINTER finally showed up in mid-January and for some of us, our first covering of snow. With it came my absolute favourite garden visitors, Long-tailed tits, looking for a tasty meal. I do sometimes see them in pairs throughout the warmer months when they’re nest building, but outside the breeding season they tend to gather in groups.

It’s so lovely to hear their constant chattering to each other as they flit from tree to tree and really bring cheer to a wintry day.

By the way, do any AG readers know the collective noun for Long-tailed tits? I’ve tried googling it but have drawn a blank.

If there isn’t one, my choice would be ‘a delight’. ‘a relish’ or ‘a revel’. I’m sure you can see where I’m going with this!

Margaret Kovriija, Fairburn, Knottingley

Fingers crossed

FOR years I have tried, to no avail, to get my wife interested in gardening, both at home and on an allotment. But my two sons TJ and Franky managed to do it in one day.

This is a picture of them planting their first plant, a buddleia, in our family garden. They went on to plant out some lillies, tulips and alliums after that too. Hopefully once my wife sees them in bloom it may do the trick.

Tony Davies-musker, Liverpool

Jenny says... With luck your sons’ enjoyment will keep your wife engaged. Getting children interested at a young age is a great idea, as Peter Seabrook will tell you!
Just a quick note to say that Tim’s noisy pigeon problem (The Editor’s Letter AG 23 Jan issue) can easily be solved, along with any other noise issues (traffic, wind, rain etc) by using ear plugs. They’re also a must when staying in hotels and you can buy them in most large high street chemists.

Ken Higham, Hambleton, Lancs

Tim says... Not a bad idea – but if I tried stuffing them in Kath’s ears she’d be thrashing me, not the wisteria!

FOR some time my wife has been using plastic bottle tops for lightweight drainage in pots and tubs. Recently she asked me if I could fasten some to the bottom of her new plastic troughs, so I thought about it for a while and decided that using pot rivets would be the best way to achieve this.

As you can see it’s very successful. Raising the trough this way aids drainage and doesn’t hinder its stability like pot feet can.

The plastic bottle tops they came from weren’t thrown away either, as they were sunk into the soil by the side of plants to assist with watering directly to the roots.

Terry Parker, Bicester, Oxon

I VISITED RHS Wisley on 31 January to see the snowdrops and some winter colour to cheer up my grey January soul.

Whilst there I visited the garden centre only to see lots of bulbs and tubers for sale. There was a lovely choice of dahlias, but I stopped and thought, surely it’s far too early to plant dahlias in early February. And I was right as on the packaging it said ‘for early flowers plant in April’. So do I buy now as there’s a good choice, or wait until April when there won’t be many left and those that are will be dried out?

There were also nerines and begonias and lots of other bulbs too. Surely it’s the job of the plants people to overwinter the bulbs and corms, not mine.

So many people are going to buy them now, only to be disappointed as it’s the wrong time to plant. And certainly RHS Wisley should know better!

Mrs Monica Cook, Staines, Middlesex

Jenny says... Buy early for the best choice, plant them in a pot and keep frost-free and in good light until April.

I had to give up the battle with our pigeon problem (The Editor’s Letter AG 23 Jan issue) can easily be solved, along with any other noise issues (traffic, wind, rain etc) by using ear plugs. They’re also a must when staying in hotels and you can buy them in most large high street chemists.

Ken Higham, Hambleton, Lancs

Sweet success

THESE cat litter trays from Poundland are perfect for the sweet peas I started off on New Year’s Day in my mini greenhouse.

They were planted in biodegradable cardboard tubes that I picked up in my local garden centre for £2.99, so it continues the thrifty theme.

I had to give up the battle with our hamsters for the toilet roll tubes!

Stuart Fairway, Hailsham, East Sussex

MY cat Ellie is a bit of a twitcher and watches birds from the bathroom window. However, she clearly wasn’t fooled for a minute by the kingfisher image that I’d stuck to the pane of glass!

Charlotte Primrose, Manningtree, Essex
Amateur Gardening Travel Offer

Classic destinations in Europe

Lake Garda, Venice & Verona
Eight days’ half board from £619 per person
Selected departures April to October 2016. The price includes:
- Return flights, taxes and transfers

What you can do now to help

Garden wildlife

It’s been such a mild winter, our garden wildlife is confused, says the Royal Society for the Protection of Birds (RSPB).

It’s been a funny old winter, hasn’t it? In December and early January there were some days in certain parts of the UK that felt more like early autumn! Since then most of us have had the odd cold snap, and certainly a great deal of wind and rain – even thunder and hailstones!

Garden wildlife would have been grateful for any extra help you gave them over winter, and if you can continue your efforts this month it will help them gear up for their most active time of year.

February is often the chilliest month, but with the mild winter we’ve been having, it’s likely that wildlife will spring into action earlier than usual. There could well be the early emergence of butterflies and bees, and toads and frogs may even start to spawn too, so keep an eye on your ponds!

**Feed the birds**

Birds of all shapes and sizes, wherever you live, will be hungry this month. Mild or not, berry and insect supplies will have been all but exhausted by now, so the food we put out will be essential.

Stock your feeders with nutritious treats and you could see all kinds of species, including exotic visitors like bramblings, redwings and fieldfares. Small seeds, such as millet, will attract the likes of house sparrows, dunnocks and finches.

Tits and greenfinches favour peanuts and sunflower seeds. Blackbirds like flaked maize, but in general, most birds will give everything a try when they’re hungry.

You could also donate some kitchen leftovers to our feathered friends – apples, pears, porridge oats, grated cheese and cooked rice and pastry will provide that all-important energy boost.

February is the month when lots of birds will be scoping out potential nest sites for the breeding season, which typically starts in April. So, if you were given a nest box for Christmas, or have one in the garage that you’ve been meaning to put up – now is the time!

Nestboxes are excellent substitutes for
One of Helen Picton’s favourite combinations: Nicotiana mutabilis with aster ‘Elta’. Natural nest sites, which are increasingly hard to find. The RSPB advises that you avoid hanging your box in areas exposed to hot mid-day sun, or wet winds. Birds will need a clear flight path to their nest, without clutter in front of the entrance. If birds don’t take to your box in the first season, don’t despair. Follow this advice and it will be occupied sooner or later!

Although they are not always seen to be quite as attractive as birds, you can do your bit to attract insects this month, too. Ladybirds and lacewings in particular are ferocious predators of aphids and other garden pests, so they are some of the gardeners’ best friends! Avoid clearing away dead vegetation in autumn and winter, as they will use this as shelter.

If you’d like to attract bumblebees, plant nectar-rich shrubs and herbaceous plants. In spring the best bets are fruit trees, native primroses, pulmonaria and spring bulbs. Hedgehogs naturally wake a few times during hibernation, but fluctuating temperatures waking them more often burns energy at a time where natural food is scarce, so replacing their lost fat is often not possible. Turn the page to discover how you can keep hedgehogs healthy and happy for the remainder of winter.

You can do your bit to attract insects this month, too.

Nestboxes

Provide a safe place for birds to roost and nest. Boxes are designed with the right dimensions and ventilation for birds, and only non-toxic preservatives are used on the wood. They should not have decorations that predators can cling to.

Open-fronted boxes

Perfect for robins (also pied wagtails and spotted flycatchers). Robins like to nest in thick, overhanging vegetation, so an ideal site for a box might be attached to a fence, which has got climbing plants such as ivy growing up it.

Small round entrances

Boxes with small round holes 1 in (25mm) across are suitable for blue, coal and marsh tits; tree sparrows and great tits like holes a touch bigger; and nuthatches, pied flycatchers and house sparrows like them 1⅛ in (32mm) across.

Larger boxes and entrances

Tawny and barn owls, kestrels, jackdaws and stock doves need larger boxes and very large holes. Boxes need to be sited at least 8 ft (2.5m) above the ground; and there needs to be a clear flight path in and out of the box.

Frogs are active now with their mating rituals. Watch out for the clumps of spawn floating on pond surfaces.
Keep hedgehogs happy

Fay Vass, Chief Executive of the British Hedgehog Preservation Society, looks at how to keep our hogs healthy

**Mild winter**

In a mild, unpredictable winter like the one we’re experiencing hedgehogs are confused. Many won’t have started hibernating until the new year, and they may not have put on enough weight to see them through to mid-March.

**DID YOU KNOW?** If the temperature is greater than 4 or 5˚C (39/41˚F), the animal’s metabolism begins to increase, which burns precious fats. A hedgehog hibernating at 15˚C (59˚F) will use double the energy a hedgehog hibernating at 5˚C (41˚F) will.

**Replacing lost fat**

If you see a hedgehog out in the daylight at this time of year, or one that looks poorly or small, you should collect it up in a high sided box with an old towel in the bottom and bring it indoors, offering meaty pet food or hedgehog food, and water.

**TOP ADVICE:** Once rescued hogs are safe indoors, give British Hedgehog Preservation Society (BHPS) a call for advice and local contacts. Offering hedgehogs food in the wild is good, along with some dry straw for bedding.

**A dry home**

Flooding, as many of us have had this year, poses a risk to hedgehogs too. They can drown in their nests and even if they do escape, there is nowhere dry to build a new nest, nor dry materials, and there will be a distinct lack of natural food.

**NEW HOMES:** Plans for making a hedgehog house can be found on the BHPS website or you can buy a number of proprietary hog homes on the market. (Pictured is the Hoggy Home from Wiggly Wigglers).

**For more information**

**Try it:**

1. Make a simple pond, in under an hour, by filling a watertight container (like a metal dustbin). Seal any holes with silicone. Fill with water and aquatic plants to attract insects and dragonflies.

2. Plant a range of nectar-rich plants (such as alyssum, sedum and ivy) to attract butterflies and bees. Bees are dramatically declining in numbers, so we need to do what we can to help them.

3. One of the things we can easily do is to make a ‘hotel’ for solitary bees. The equivalent of bird boxes, these are made by packing cut bamboo canes, straws and hollow plant stems into a wooden box.

4. In an out-of-the-way corner, pile some old rocks or logs together, and leave them with lots of gaps and holes. It will be a safe haven for insects, as well as frogs, toads and newts.
Refresh and renew your conservatory for the year ahead

Invest in a Conservatory Care Valet from Thomas Sanderson

Remember when you first had your conservatory? How smart it looked. How pristine clean everything was. Well, by investing in a Thomas Sanderson Conservatory Care Valet, it can be again!

Every conservatory slowly loses its sparkle. Over time, the accumulation of dirt, algae and pollutants can turn the brightest and whitest into the duldest and greyest no matter how much you try to keep it clean. Added to which, with a fragile glass roof and hard to reach areas, it’s a job many of us do our best to avoid.

We’ve been enhancing every kind of conservatory across the UK for over 25 years with our handcrafted blinds and shutters. Now, we’ve gone one step further. Our Conservatory Care Valet will not only restore your conservatory to its former glory both inside and out, it will help keep it that way too.

Using bespoke cleaning and care treatments our two person technical team will meticulously clean and polish your conservatory. Completed in just a single day, a Thomas Sanderson Conservatory Care Valet will put back that ‘as new’ look and inspire you to make the most of your conservatory all over again.

“The conservatory hasn’t looked so clean since it was originally built.”

Plant focus

Grow Daphne odora ‘Aureomarginata’

This easy-to-grow daphne will fill the late winter garden with a sweet, lily-like fragrance.

Why grow it?
Because it is one of the most heavenly scented shrubs you’ll ever plant. This little evergreen, whose glossy leaves are prettily outlined with a creamy silvery edging, has tiny deep pink flowers that pack a powerfully fragrant punch out of all proportion to their dainty size. You’ll notice the bud clusters forming in late January, ready to scent the cold air as winter gives way to early spring. This is one of the smaller daphnes and certainly the earliest to flower. It takes a long time to grow steadily to its maximum height of 3-4ft (1 to 1.3m). A few sprigs brought into the house are better than any scented candle or diffuser.

How to grow it
Don’t crowd your daphne out, but give it space in a woodland area where it will enjoy the well-drained humus-rich soil. It is equally happy in an acidic or alkaline soil but a heavy clay that suffers from winter wet will see it sulking and refusing to flower. Light shade is fine and if you have the right conditions alongside a path, or underneath a window, you will enjoy it all the more. It needs little or no pruning – cutting a few flowers is quite enough.

Looks good with...
Grow with other scented shrubs such as Stachyurus praecox or Sarcococca, the Christmas Box, and underplant with scillas, small daffodils and Muscari ‘Valerie Finnis’.

Artistry and planting come together in perfect harmony in the quirky Hampshire garden created by Jo Carter and Richard Farrington

Jo Carter doesn’t turn a hair when husband Richard brings his work home and leaves it in the garden. And if it’s there for a while it’s more than likely to end up with plants growing through it, which is just what he likes to see.

Fortunately none of the items have been the full-size versions of the metal sculptures Richard creates, many of which are now landmarks throughout the UK – amongst them the 20ft (6m) high cricket stumps at Hampshire cricket ground and the charm bracelet overlooking the bay at Hunt’s Cliff on the Cleveland coast. Instead the pieces are smaller creations, including scale ‘maquettes’ (sculptor’s models) of his larger designs.

“We have things from the beginning of Richard’s career 30 years ago to new pieces that he brings back for us to talk about,” Jo explains. “They’ve all become part of the garden.” That’s not to say that all this creativity is one-sided: Jo studied fine art sculpture herself before becoming interested in gardening and garden design and brings her own artistic flair to her family’s plot in Alton.

Their 1940’s property has been home for 17 years, although the almost square back garden was an entirely different prospect when they moved in. “It consisted of grass, brambles, two gnarled apple trees and a scattering of LPs,” Jo recalls.

Today it’s a sophisticated space for entertaining family and friends, a showcase for Richard’s work, the location of his studio and a home for a huge variety of plants. “I’m always putting new things in,” Jo admits. “Quite a lot of plants are chosen for their foliage. I like bringing different shapes together and am very drawn to quite large scale things, which I think is always fun in a small space. It plays on scale quite nicely.

“I’m quite happy with how it is now,” Jo concludes. It’s functional and relaxing – a place we both really enjoy.”

“Free Stella Cherry Tree When You Buy One For Just £14.99!”

Yes it’s true... you can now grow pounds and pounds of incredibly sweet cherries, perfect for eating fresh off the tree and save a fortune too. If you only have space for one fruit tree, grow ‘Stella’!

S & L FERTILE (so it doesn’t need a second variety of cherry tree to pollinate it) and a really heavy, reliable cropper. ‘Stella’ will thrive in any UK garden and can also be grown in a pot on your patio! The sweetly flavoured dark-skinned, plump and juicy, aromatic fruits will be ready to pick from mid-late July. In a few years, you can expect upwards of 5kg (11lbs) of sweet fruits per tree, which will save a small fortune compared to paying supermarket prices! What’s more, the beautiful Cherry Blossom will brighten your garden and marks the beginning of another spring!

Harvest up to 11lbs (5KG) of juicy cherries per tree
- Easy to grow, no specialist knowledge or soil treatments
- UK winter hardy
- Save a small fortune on supermarket prices

Stella’s beautiful blossom sees in each new spring

BONUS OFFER 1 Braeburn Apple

Braeburn trees are renowned for their bumper crops – even in their first season these trees will yield several pounds of deliciously juicy and crisp mouth-watering fruit!

Bare-Root Tree
HALF PRICE £7.49
No additional P&P

BONUS OFFER 2 Victoria Plum

Bumper crops of mouth-wateringly sweet, juicy plums from July every year, when gloriously pretty white blossoms in spring – all from “The Nation’s Favourite Plum” Bare-Root Tree

HALF PRICE £7.49
No additional P&P

Our grower-quality, multi-branched bare-root trees have been grafted on to dwarf rootstock to provide a compact and manageable tree 2m (6-7ft) tall.

WINTER HARDY
HERE'S an apple tree that I've inherited on my nursery, and following a storm, it now leans to one side like a fruit-tree version of the Tower of Pisa.

Apples can live for over 200 years and as this one is barely 15, it begs the question why a tree in its first flush of youth should start to fall over.

Could it be that a subterranean rot such as phytophthora is at work, causing the roots to give up their hold on mother earth? Or have the roots been killed by compaction – so often caused when cars are parked beneath the canopy?

Both are possibilities although my guess is that the tree has never established strong roots because it was mollycoddled by being staked for too long.

If supported for more than two years, trees are slow to stand on their own feet. Also, instead of a 3–6.5ft (1–2m) grass exclusion zone that young trees need, water and nutrient-robbing turf has been left to grow up to the trunk, weakening the roots. No wonder they lost their grip in the gales.

The bigger issue though, is what to do when such a tree takes a tumble? As a rule, if a trunk is easy to push back into place, chances are the roots are so damaged and fractured they won’t survive and the tree is best pulled out.

If it’s difficult to push upright, the roots are still strong but have simply slipped in the soil to the wrong place.

That’s the case with this apple, so I’ve come to its rescue, driving three hefty wooden stakes in at its front as props for the leaning branches, and I’ve added another at the back to anchor the tree from behind.

It might look like it’s walking with a Zimmer frame and lost some of its balance and beauty, but it’s stable and with some TLC there’s every chance it’ll be back and as bountiful as ever.

Fingers crossed!

Apple rescue plan

Toby helps to save a tree that’s fallen victim to winter storms

**Toby**

There’s an apple tree that I’ve inherited on my nursery, and following a storm, it now leans to one side like a fruit-tree version of the Tower of Pisa.

Apples can live for over 200 years and as this one is barely 15, it begs the question why a tree in its first flush of youth should start to fall over.

“IT NOW LEANS LIKE THE TOWER OF PISA”

If supported for more than two years, trees are slow to stand on their own feet. Also, instead of a 3–6.5ft (1–2m) grass exclusion zone that young trees need, water and nutrient-robbing turf has been left to grow up to the trunk, weakening the roots. No wonder they lost their grip in the gales.

The bigger issue though, is what to do when such a tree takes a tumble? As a rule, if a trunk is easy to push back into place, chances are the roots are so damaged and fractured they won’t survive and the tree is best pulled out.

If it’s difficult to push upright, the roots are still strong but have simply slipped in the soil to the wrong place.

That’s the case with this apple, so I’ve come to its rescue, driving three hefty wooden stakes in at its front as props for the leaning branches, and I’ve added another at the back to anchor the tree from behind.

It might look like it’s walking with a Zimmer frame and lost some of its balance and beauty, but it’s stable and with some TLC there’s every chance it’ll be back and as bountiful as ever.

Fingers crossed!

**Toby’s top tips**

- If a tree or shrub starts to lean, trim out at least a third of the canopy to compensate for the loss of roots. Then stake it to help prevent wind-rock.

- Remove grass around the base of establishing trees and mulch to keep weeds down, which helps roots thrive.

**Apple trees can live for over 200 years**

**Tune in to Toby on BBC Flower Show coverage**

**Give roots a boost**

Now is the time to sprinkle root-boosting bone-meal around the base of trees, shrubs and roses. Applied now, the feed has time to work its way down to the roots so it’s there for when plants need it during the rush of spring. Scatter roughly a gloved handful over every square meter of soil and lightly rake it in.
